- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

### 4.1 General site character

N16	20.0
N07	15.0
N23	3.0
N12	37.0
N08	25.0
<b>Total Habitat Cover</b>	<b>100</b>

### Other Site Characteristics

Elevata dinamicità delle comunità vegetali igrofile Si segnala la presenza degli habitat Corine 22.43 e 53.21.

### 4.2 Quality and importance

Raro esempio di rinaturalizzazione di ambiente estrattivo nell'alta pianura lombarda e sito di rilevante importanza naturalistica, sia per la presenza di specie vegetali rare nell'ambito pianiziale padano, che per la varietà di habitat idro-igrofilo tipici della pianura e ormai scarsamente diffusi. E' presente nel sito la *Ludwigia palustris*, appartenente alla lista rossa nazionale. Significativa la presenza dell'ornitofauna, che annovera anche specie di interesse comunitario, e dell'erpetofauna (es *Rana Latastei*, *Triturus carnifex*). In particolare, per quanto riguarda l'ornitofauna, è accertata la nidificazione di 2 specie SPEC2 e 4 specie SPEC 3. Il sito svolge un ruolo strategico per la continuità ecosistemica e biologica in collegamento funzionale con il vicino corridoio biologico del corso del fiume Adda.
